

A

Ns=300: mean / consensus width (upper 95%)

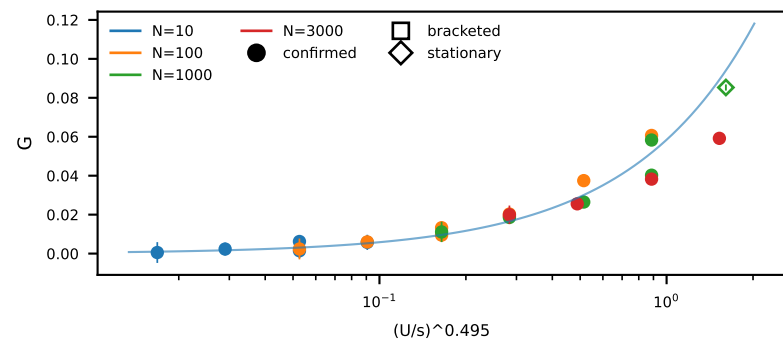

Ns=3000: mean / consensus width (upper 95%)

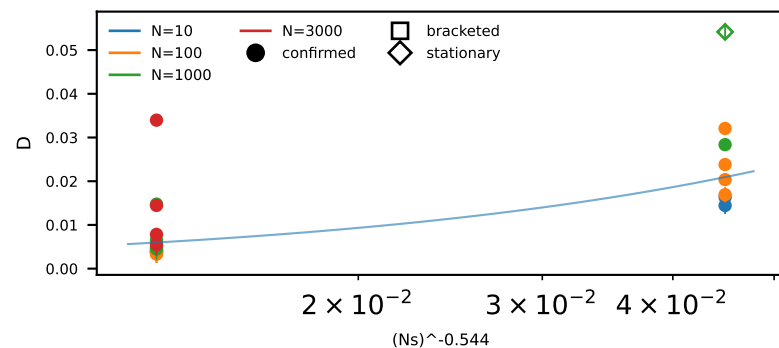

max width; × invalid; * narrow; diamond stationary

B

G versus B scaling; diamonds = S additions

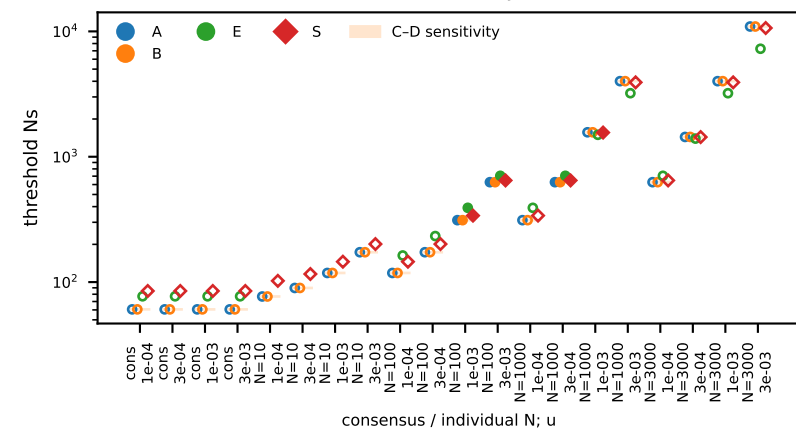

D versus B scaling; diamonds = S additions

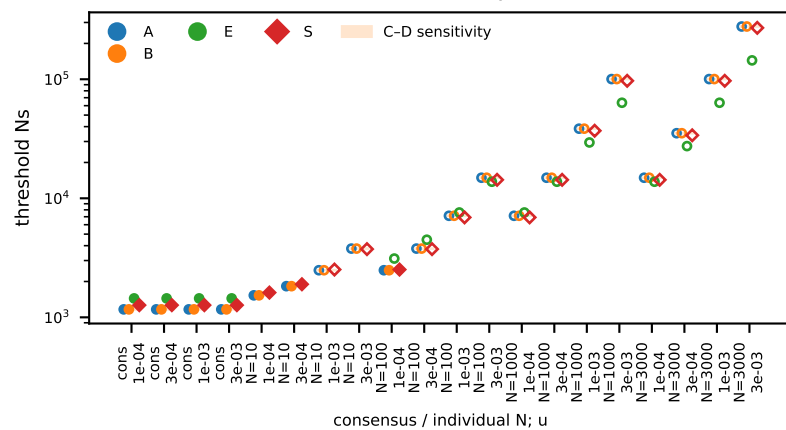

C

95% efficiency

99% efficiency

B: bars = bracket bounds; diamonds = stationary mean $\pm 95\%$. C: open = extrapolated; × = poor fit; shade = C-D sensitivity.
